Cake PHP CSS PHP MySQL

HTML jQuery Ajax

Introduction

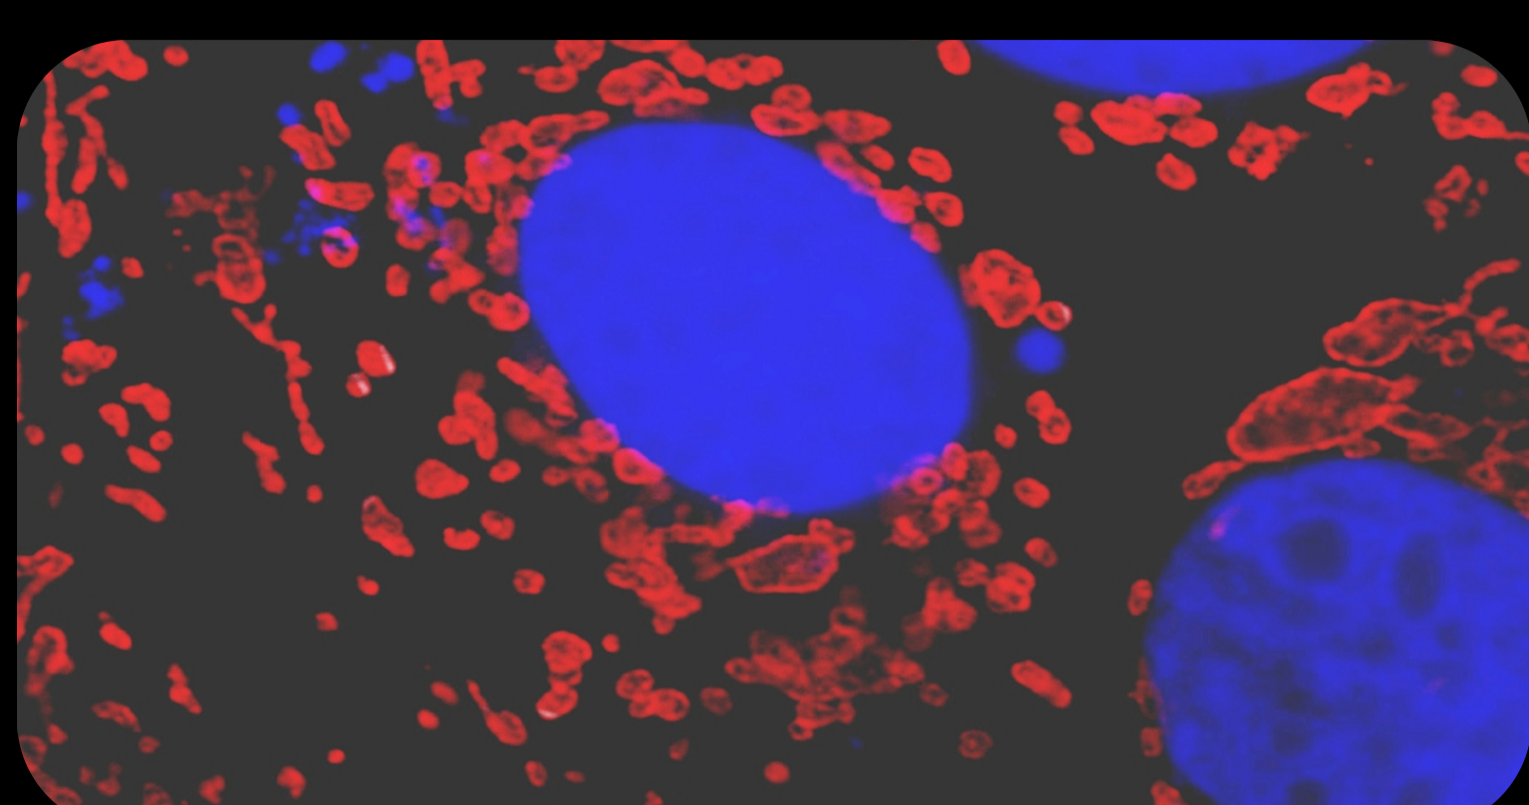

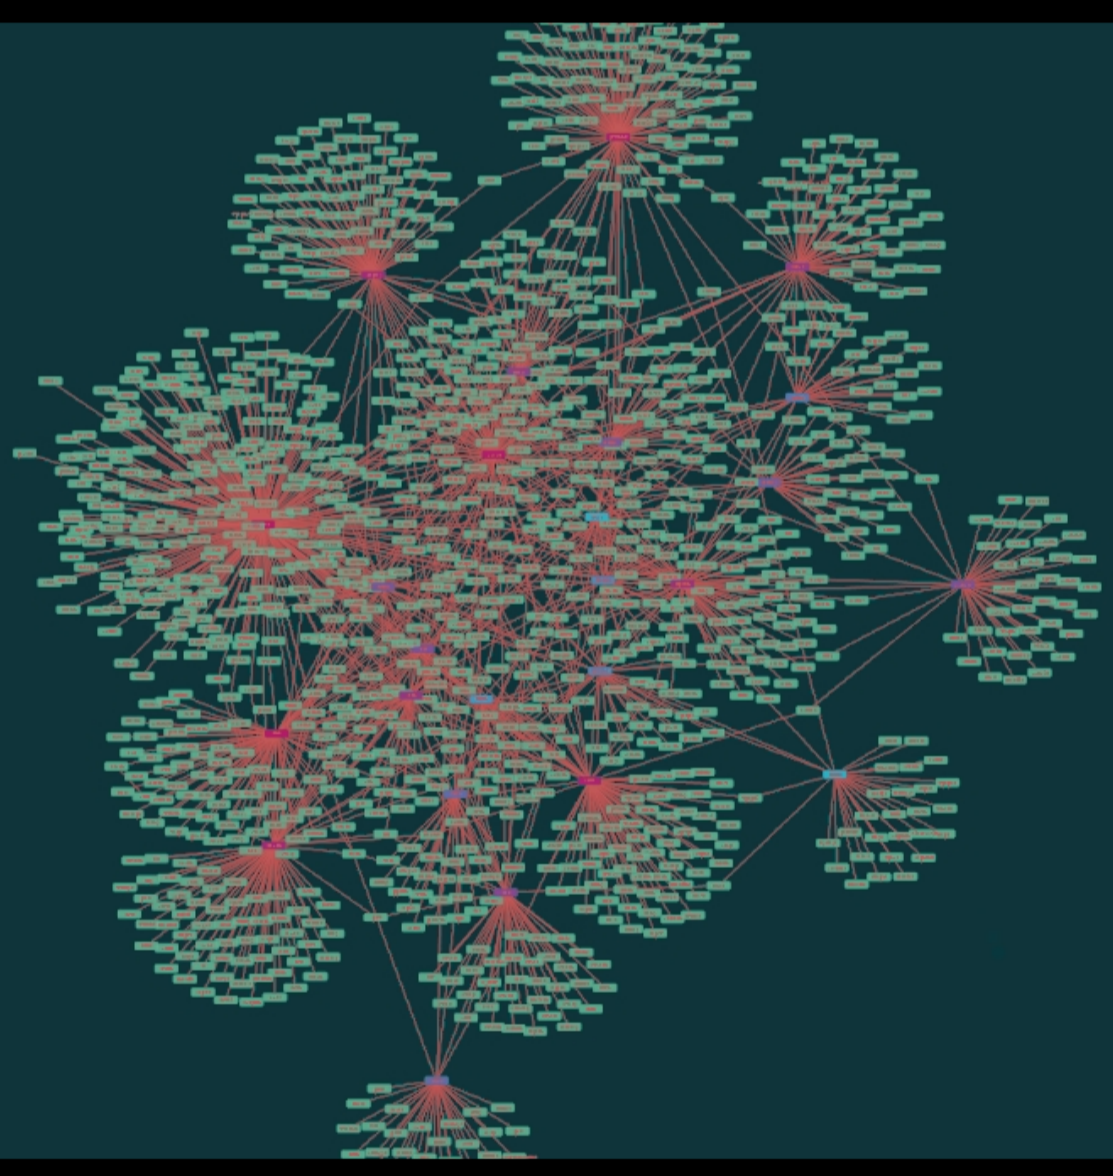

Andolasoft has developed a website for the Institute of life sciences where applicants can apply for various job posts offered by the organization.

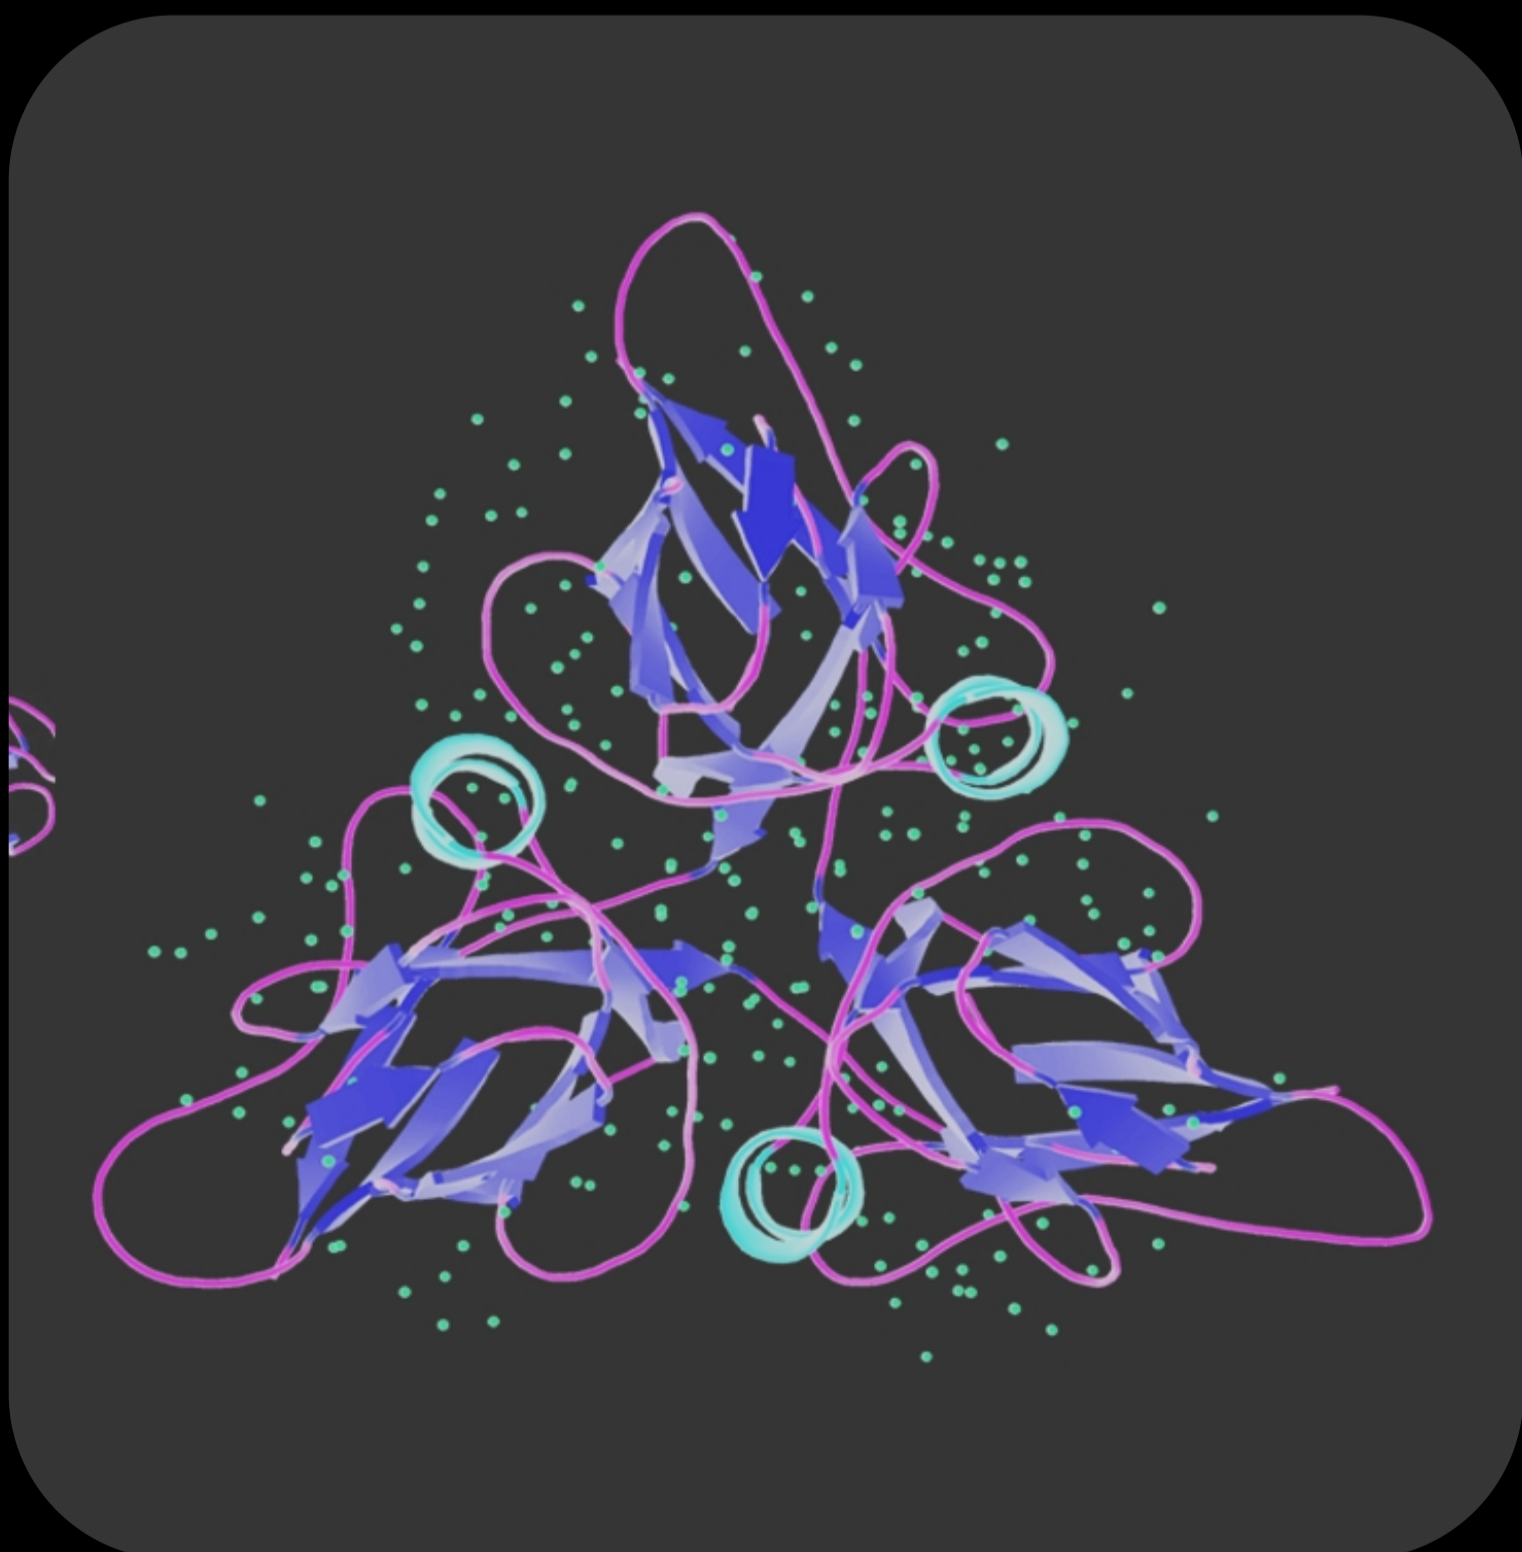

Institute of Life Sciences has a broad vision of carrying out high-quality multi-disciplinary research in the area of life sciences. The goal is the overall development and betterment of human health, longevity, agriculture and environment. The stated mission of the institution is to work towards upliftment of the human society and generate skilled human resources for future India.

These are achieved by undertaking cutting-edge research using state-of-the-art technologies in the fields of vector-borne diseases such as malaria and filaria, viral infections, cancer biology, allergy and auto-immune disorders, genetic disorders, and agricultural productivity. Towards this, the institute has established necessary infrastructure, including research facilities, genomics and proteomics platforms, flow cytometry, imaging facilities, animal house, green-house, plant tissue culture and zebrafish facilities and high performance computing facility etc. with financial support from the Dept. of Biotechnology, Govt. of India.

Problems

- ✓ Offline job application is way more difficult for the applicants because they have to deal with more paperwork.
- ✓ The organization which receives the applications has to keep track of documents of every applicant based on the position applied.
- ✓ It is very difficult to sort, shortlist the applications by looking at every application form.
- ✓ There is a chance of loss of applications until it reaches the organization.

Solution

- ✓ With the online job application form, ILS gets to successfully reach out to more applicants.
- ✓ It is also true that many job applicants, particularly those under 30, are more comfortable using a keyboard to communicate than a pen or pencil. Employers also benefited like hiring employees will no longer have to squint while deciphering poor handwriting.
- ✓ All the application form data is saved centrally in a database and can be viewed easily by the ILS employees. In this way they have more control over the short listing and selection process.
- ✓ Hence, Andolasoft has developed a secured website, so the application process and the applicant details can be stored securely.

Outcomes

The web application developed by Andolasoft using cakePHP 3.4.

Within very little time, the application went into production and thousands of job seekers were able to apply for the positions offered by ILS.

Andolasoft Engagement

Andolasoft is a trusted web and mobile apps development company based in San Jose, CA, USA and a proven partner for all your web and mobile app development needs. We believe we have the right experience to help you with the same

Are you interested in developing and maintaining your application by Andolasoft! Please email us your details at info@andolasoft.com and we will get back to you as quick as possible.
